

MAINTENANCE

Proserv Flex

Customized preventive maintenance programs

Working in conjunction with your printservices consultant, you can now design your own customized preventive maintenance program from our wide selection of options.

The demands placed on printing presses are much different than in years past. With 24 hour/7 day schedules required to meet the delivery requirements of your customer, it is imperative that unscheduled downtime be held to a minimum. Planned preventive maintenance must be done effectively, to minimize downtime and maintain the press to meet the requirements necessary to be competitive in today's print market.

Often customers have on site personnel capable of performing portions of the required maintenance. After years of daily use, however, they may need to do more than just standard maintenance to capture the level of quality and productivity that they once enjoyed. manroland has responded by developing ProServ Flex to meet the needs of our customers.

Picking the right solutions

The customer, can select the program that best meets your needs from ProServ Basic, Basic Plus, Comfort, or Supreme or you can build a ProServ Flex program from the many components offered by manroland to meet the exact requirements of your pressroom. Your PRINTVALUE consultant will help you design a custom program of those preventive maintenance services you may not be able to perform with in-house staff or that you require to address specific needs that may exist on your press.

Create your own bundle of solutions

All of the ProServ Flex preventive maintenance services are competitively priced to help you in managing the life cycle costs associated with your press. Many of these preventive maintenance selections can be bundled with the required **printcom** consumable products such as lubricants and filters, or with our certified manroland parts for further savings. ■■

Customized preventive maintenance programs can be defined to meet your exact needs.
