# Mechanical Audit

## To increase production reliability

**Mechanical audit for keeping quality standard of the print products consistent.**

Our mechanical audit is based on comprehensive, customer-specific check lists.

These check lists are used to examine all mechanical components of the reel splicer, printing units, folder superstructure and folder. This must be done regularly to ensure a high level of press reliability.

We can prepare an individual audit package for you that takes the maintenance structures of your plant into account. The mechanical audit is carried out at least once a year within the scope of the service contract.

Specific information serves to recognize both excessive and insufficient maintenance. We can discuss with you ways and means to optimize the maintenance. ■■

Detailed inspection of the mechanical components

## Advantages

- Preparation of a detailed report with evaluations of all test charts
- System inspection on the basis of agreed check lists
- Weak points in the press are identified
- Planning of repairs or other necessary actions is facilitated
- Long-term actions for system optimization can be defined
- Scheduling of work to suit your production situation

## Project duration

The time needed depends on the size of the press and availability of the press for the work to be done which in turn depends on your production schedule

## Price

Fixed price per press or pressline; travel and other costs included in the service contract
